SHADOWDRAGON

SocialNet/

Bad Guys share too much information online.
Use it against them.

Uncover identities, correlations, networks of associates, and available geographical information in just minutes.

Like most of us, criminals enjoy the benefits of online activities and social networking. SocialNet™ captures these digital tracks, maps against their aliases, and explores their connections in near real time to expedite your investigations and threat analysis.

SocialNet performs automated searches of social networks and online account-based activities by email addresses, aliases, and names. The results are visualized in minutes to reveal detailed correlations, larger networks of associates, and more.

FEATURES

Identities
Map out identities online and connections between those identities.

Correlations
Follow the breadcrumbs of your target's digital life and find hidden correlations in your research.

Networks of Associates
Make connections between bad actors and visualize their networks.

Geography
Create a map of suspicious activity and follow your suspect's trail.

Visualize and discover the social network.

SOCIALNET IS USED TO/

Connect, resolve, and verify social media aliases to personal identities

Widen scope of investigations by identifying social media associates

The good guys need the right tools to win.

U.S.-based and dedicated to providing our allies with every advantage, we combine decades of in-the-field investigative experience with the bleeding-edge tactics and techniques to reduce the friction of sourcing, collecting, and sorting open source data.

Our stuff works with your stuff.

Many of our tools are built with RESTful APIs and to integrate with today's leading investigative and data platforms, like Maltego, Proofpoint, and Kaseware. We even have utilities to free your own data and make it more usable across platforms.

SHADOWDRAGON

Getting answers is easy with the right software and data.
