

MalNet/

Malware is more than code. **It's bad code in motion.**

Search and view attacks in motion or go back in time.

When malware strikes, you need to quickly find, identify, and mitigate its effect. MalNet™ speeds up your investigation, allowing you to start with any artifact and pivot through its network and activity to find the source of threat actors, identify the magnitude of related infections, and mitigate the effects of a malware attack.

FEATURES

Proofpoint ET Intelligence

Access industry-leading current and historical intelligence.

Transform

Analyze data using 100+ commercially supported transforms.

Make Connections

Connect specific attacks to billions of available indicators and visualize campaigns of thousands of records.

Geographical Locations

Create a map of suspicious activity and follow your suspect's trail.

Visually explore and
uncover malware
connections in seconds.

MALNET IS USED TO/

Streamline time and energy context without the need to switch between data collection and analysis

Map large and complex malware campaigns and their C2 infrastructure

Uncover IDS signatures that key on traffic and IOC from specific malware samples

Produce better, more focused reports without the hassle of manual collection effort

Discover additional malware from a compromised domain or correlate dates

Gain cyber threat intelligence relating to malware artifacts

MalNet enables incident responders, threat analysts, and law enforcement to identify and visualize malware connections in just seconds to expedite investigations, response, and malware protection.

MALNET IS USED BY/

- _ MSSP Teams
- _ SOC Teams
- _ Cyber Threat Intelligence Teams
- _ DFIR Consultants
- _ Legal Professionals
- _ Detectives and Investigators
- _ Corporate Security

Get started with a free demo and 30-day license.

See malware in motion. Schedule a free demo to see what ShadowDragon™ can do for your prevention and incident response.

The good guys need the right tools to win.

U.S.-based and dedicated to providing our allies with every advantage, we combine decades of in-the-field investigative experience with the bleeding-edge tactics and techniques to reduce the friction of sourcing, collecting, and sorting open source data.

Our stuff works with your stuff.

Many of our tools are built with RESTful APIs and to integrate with today's leading investigative and data platforms, like Maltego, Proofpoint, and Kaseware. We even have utilities to free your own data and make it more usable across platforms.

SHADOWDRAGON

Getting answers is easy with the right software and data.
